

# CFO CONTROL TOWER

## Helping CFO Offices With Their Reporting Needs

Today's Federal CFO plays an integral role in financial and performance management and the need for agility, speed, and performance of financial analytics and reports are critical keys to their success. The need to be agile is further heightened as external compliance reporting such as the DATA Act and GTAS reporting are vital parts of the CFO's responsibility. CFO Control Tower is a toolkit solution that enhances financial systems to ensure the CFO can immediately, reliably, and accurately meet their financial reporting requirements internally and externally for compliance.

### AUTOMATION

Early and accurate alerts without manual intervention

### ANALYTICS

Meaningful, summary to detail information delivering right now analytics

### EXTERNAL COMPLIANCE

Compliant and correct "output" on time, every time

### SYSTEMS ASSURANCE/SECURITY

Secure, compliant, integrated

Traditionally, accessing analytics and reports out of financial systems means enabling staff to manually produce data for reporting. This approach delays end users access to the most recent data, limits the ability to mine the data being produced, and creates an overreliance on lagging performance measures.

cBEYONData's CFO Control Tower provides pre-built components and a proven service delivery process that provides right now financial analytics and reports accurately, predictably, and affordably.

### The CFO Control Tower is a combination of:

- Over 100 pre-built financial, procurement, budget, and other standard Agency reports
- More than 20 pre-built analytics such as Open Obligation Dashboard and Status of Funds analysis tools.
- 10 Metadata Layers (universes) used to bring together the complex view of multiple financial data bases.
- Pre-built Data Models (for Oracle and SAP Hana) used to aggregate all the disparate data
- System routines used to gather, cleanse, store, and analyze data for GTAS and DATA Act Reporting.
- Four Packages of Pre-built data extraction tools (ETL's) for Momentum, FPDSNG, USA Spending, and NFC.

# CFO CONTROL TOWER

## CFO Control Tower

Consists of pre-built components, content, and collateral that consolidates disparate financial systems to produce reports, alerts, and analytics delivered through a single integrated toolkit solution.

### AUTOMATION

CFO Control Tower includes pre-built systems integration routines that extract data from internal and public source systems.

### ANALYTICS

CFO Control Tower enhances financial systems through analytics that provide meaningful and diagnostic information right now.

### EXTERNAL COMPLIANCE

CFO Control Tower takes the guess work out of external compliance including GTAS, DATA Act, and other Treasury reporting requirements.

### SYSTEMS ASSURANCE/SECURITY

CFO Control Tower provides Systems Assurance, Data Lineage, and Security Services resulting in secure, compliant data, reports and analytics.

**cBEYONData's CFO Control Tower includes all components, content and collateral.**
